

CLAIMS

What is claimed is:

1. A tool receiving box, including a toolbox for a tool with shanks of different sizes to be held therein wherein the toolbox is made up of a pivotally closed/opened movable lid attached to one side of a receiving box having a tool retaining cavity indented at one inner side for a tool head to be retained therein, and a plurality of elongated grooves extending axially in rows at the other inner side thereof for the shanks to be adapted therein respectively; the present invention being characterized by that,

—the toolbox also having a plurality of insertion grooves of various sizes preset at large plane surfaces thereon, correspondingly matched to the shanks of different sizes respectively for the shanks to be vertically inserted therein and neatly displayed thereon in repairing work.

2. The tool receiving box as claimed in Claim I wherein a plurality of insertion holes of various sizes can also be preset at the large plane surface of the receiving box of the toolbox thereon, correspondingly matched to the shanks of different sizes respectively for the shanks to be adapted therein for location thereby.

3. The tool receiving box as claimed in Claim I wherein a plurality of insertion grooves of various sizes can also be preset at the large plane surface of the movable lid of the toolbox thereon, correspondingly matched to the shanks thereof.

4. The tool receiving box as claimed in Claim I wherein a plurality of insertion

grooves of various sizes can also be preset at the large plane surface of the receiving box thereof, correspondingly matched to the shanks thereof.

5. The tool receiving box as claimed in Claim I wherein a plurality of insertion grooves of various sizes can be preset at large plane surfaces of the movable lid and the receiving box thereof respectively, correspondingly matched to the shanks thereof.
